Summary

I have over 3 years of experience in frontend development. During my freelance work, I gained experience in a wide range of projects, from WordPress to Next.js. After that, I worked at Mallconomy, where I enhanced my skills in state management and project architecture through various React/Next.js projects. Currently, I am working at Hypeople Studio, where I develop web applications tailored to individual and corporate clients. I strive to continuously learn and improve, focusing on creating innovative, user-centered solutions.

Experience

Hypeople Studio 03/2024 - Present

Frontend Developer
Techs: React, Next.js, Supabase, Javascript, Typescript, Node.js, Ant Design, Material UI, Redux, Context API, PugJS, Lottie

At Hypeople Studio, I develop end-to-end web applications tailored to the needs of both individual and corporate clients. Throughout this process, I specialize in delivering customer-focused projects with a strong emphasis on user experience, performance optimization, security, and scalability. Additionally, I integrate modern web technologies and advanced animations into these projects, providing innovative and impactful solutions.

Mallconomy 10/2022 - 01/2024

Frontend Developer
Techs: React, Next.js, Javascript, Typescript, Web3, Redux, Context API, Storybook

Mallconomy is building the metaverse's most fun shopping mall on Polygon specifically for the creators, brands and workers, with immersive dynamics, exclusive partnerships and the endless possibilities of a robust GameFi economy.

- I developed a web app where users can log in with their social media accounts or web3 wallets, complete marketing tasks, earn points, and convert these points into rewards.
- I transformed a web application where users earn rewards by completing marketing tasks, which had a total of 1.2 million users and high traffic, into a SaaS model. While working on this project, I particularly improved my skills in state management and project architecture.
- Developed an admin panel to oversee user actions and tasks.
- I developed a web application using React, Typescript, and Ethers.js where users can perform minting and claiming operations for MallCard NFTs within the Mallconomy Metaverse on the Polygon network. In this app, I enabled them to view their referral rewards and the Mallconomy points earned through their NFTs.
- I developed a token sale page where users can purchase tokens using their web3 wallets, enabling a client for whom we provide technological infrastructure services to conduct token sales.

Freelance 2016 - 2022

During my time as a freelance frontend developer, I developed various WordPress websites and distributed a few free themes. Subsequently, I reinforced my skills in Next.js by developing several web applications, continuously improving myself.
